SIMPLE COMPLEXITY

OUR CHALLENGE

Ensure that:

1. All Nestlé businesses have access to and the capability to work with People Analytics to drive better people decisions
2. Analytics are useful and actionable in the business
3. Any Nestlé business can engage with People Analytics

PEOPLE ANALYTICS @ NESTLÉ

ORCHESTRATING PEOPLE STRATEGY AND PLANNING

Supporting the execution of the people strategy through tools and frameworks incl. Strategic and Operational People Planning

GOVERNING PEOPLE DATA STANDARDS

Managing the compliance with and governance of change process to Nestlé's People Data Standards

ANALYTICS: DESCRIPTIVE AND PREDICTIVE

Measuring the impact of HR intervention and megatrends
Using statistical models and reasoning to address top workforce concerns

PEOPLE MEASUREMENT: KPI'S AND DASHBOARDS

Measuring progress against strategic priorities through dashboards and automation.

Pay Analytics Toolkit
(2017)

Measuring Reward Maturity

Nestlé & I

- Rewards received increased favourable score in 2016
- + single digit % on 2014 survey results, + double digit % on 2012
- Single digit % above High Performing Companies norm
- Rewards Maturity has positive correlation with
 - Performance distribution levels
 - Leadership Effectiveness scores
 - Rewards scores
 - Profitability

PAY ANALYSIS

Q HOW DO WE MONITOR FOR FAIR PAY PRACTICES

Pay equity analysis checks the current payroll against the compensation philosophy.

SOLUTION

Interactive, web-based application that enables local C&B to investigate Pay Equity through linear regression.

- Create applications directly from R
- No web development skills needed
- Users can interactively look at results from the analysis

PAY ANALYSIS

1

UPLOAD DATA

Template file is provided

2

SETTINGS

Input year and market of interest

3

INSPECT YOUR DATA

Take a look at the descriptive plots of the data

4

MODEL BUILDING

Decide which variables you want to include in your model

5

DIAGNOSTICS

Check the quality of the model

6

RESULTS

Interpret the results

PAY ANALYSIS

MODEL BUILDING Which variables should be included in the regression model?

Accounting for **these** **is this correlated** with **this** outcome?

Control variables

job level
seniority
work experience

Independent variable

performance

Dependent variable

pay

STEPWISE ALGORITHM

Aimed at improving the predictive ability of the model

ASSUMPTIONS CHECK

Diagnostic plots guide the user to decide whether the model is adequate

QQ-plot checks for normality of the error terms

PAY ANALYSIS

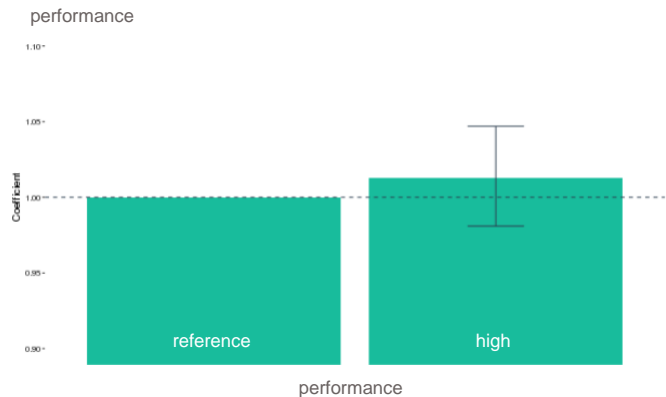

Histogram of Years in Nestle

Boxplot

PAY ANALYSIS

Predictor	Estimate	95% Confidence Interval
-----------	----------	-------------------------

High Performance	1.013	[0.981; 1.047]
------------------	-------	----------------

High performers earn 1.013 times what the reference category earns.
When controlling for the other variables in the model, the difference in pay between high performers and the reference group is not statistically significant.

Merci
